Sprint 5 – Financial Ratios and Dashbord Feature List

All users:

1. Can view the financial ratios and dashboard on the landing page for all ratios data is available in the solved problem once successfully logged into the application;
2. Menu buttons found on other pages must also be accessible on the landing page depending on what each type of user is typically allowed to access – administrator, manager, and accountant;
3. A section of the landing page can also be used to display important messages such as if there are journal entries waiting for approval, etc.
4. Dashboards must display using three color codes – green (good), yellow (borderline or warning range), and red (needs closer look.). Research normal ranges for the different kinds of ratios. I have already given you some examples in class.
5. The look and feel of the landing page must be consistent with all other pages found in the application.
